EDUCATION

RV University

Bengaluru, Karnataka

B.Tech in Computer Science (Honors)

Sep 2023 – Jun 2027

- Minors: Entrepreneurship | Specialization: Artificial Intelligence and Machine Learning
- Current CGPA: 9.72/10

EXPERIENCE

Open Source Contributor - Google Summer of Code

Remote

Accord Project

May 2026 – Present

- Selected for **GSoC 2026** to build **automated compilation verification** across all **16 Concerto code generation targets** (Java, TypeScript, Go, Rust, C#, GraphQL, Protobuf, and more), closing a gap where CI only checked that the generator ran without crashing.
- Architected per-target **Docker images** bundling the Concerto CLI and language toolchains, publishing to **GitHub Container Registry** with layer caching to keep CI builds fast.
- Built a **GitHub Actions matrix workflow** that generates code from a versioned **.cto test corpus** and compiles/validates it inside the correct container on every pull request, failing fast on invalid output.

Skills: Go, Java, Node.js, Docker, GitHub Actions, CI/CD, Distributed Testing

Software Engineer Intern

Onsite

Ratch.ai (Intellicar)

Feb 2026 – Current

- Co-developed and maintain **backend microservices** for a video conferencing platform – meet.ratch.ai – with **agentic AI features**, owning core services end-to-end as a full-time contributor on the engineering team.
- Designed and built a **concurrent notification service in Go**, using **goroutines, channels, and worker pools** to fan out real-time events to clients with low latency under concurrent load.
- Independently set up and administered **Jenkins CI/CD pipelines** for the organization from the ground up, migrating the team from **manual deployment** to automated build, test, and release workflows.
- Contributed to **core architecture** through development, testing, and debugging efforts, improving overall system reliability and performance.

Skills: Go, Concurrency, Microservices, PostgreSQL, Jenkins, CI/CD, LiveKit, VAD

Python Developer Intern(Reference)

Hybrid

Sri Aranea

Jun 2025 – Nov 2025

- Co-developed the **backend architecture** of a **Flask–React system**, implementing **secure authentication** and **role-based access**, while building **scalable APIs** for core workflows, improving operational efficiency by **40%**.
- Outlined and implemented the full **database architecture** using **SQLAlchemy ORM**; deployed on a **VPS** with MySQL, SMTP, and production-grade rate-limiting and request validation.

Skills: System Design, Flask, MySQL, SQLAlchemy, RBAC, REST APIs, VPS Deployment

AI Intern (Reference)

Remote

Santaan

Oct 2024 – Apr 2025

- Designed and trained **30+ deep learning model variants** to classify oral and ear scan videos for a public health screening of **1M+ children**.
- Used **MobileNetV2, ResNet, and LSTM architectures** to achieve **85%+ accuracy** using data augmentation and cross-validation, while extending the work with **minLSTM/minGRU** for efficiency.

Skills: Deep Neural Networks, TensorFlow, Keras, OpenCV, Roboflow

PROJECTS

Next-Hire | Python, PostgreSQL, Next.js

May 2025 – Present

- **Collaborated on building** an end-to-end recruitment platform with portfolio-based candidate profiles.
- **Developing** an adaptive skill assessment system with **AI-powered avatar interviews**, conducting 20+ technical evaluations with automated scoring.

TECHNICAL SKILLS

Languages: Go, Java, Python, C, HTML, CSS, SQL

Systems: Concurrency & Goroutines, Distributed Systems, Microservices, Multi-threading

DevOps: Docker, Jenkins, GitHub Actions, CI/CD, Git+GitHub

Tools: Jupyter Notebook, IntelliJ, VS Code, Postman, pgAdmin

Cloud + Hosting: GCP, AWS, Vercel, Render, Supabase, Neon
